

Yahye Mohamed Awil

AI AGENT ENGINEER · FULL-STACK · AWS · TERRAFORM

I build AI agents businesses can trust: governed, audited, and deployed on AWS.

EMAIL yahyeawil4@outlook.com

GITHUB github.com/yahyeameer

BASED Hargeisa · Remote, UTC+3

SPECIALTIES

- AI agents & multi-agent orchestration
- Governed, auditable AI with human approval
- Multi-tenant SaaS architecture
- AWS infrastructure as code
- Data pipelines, connectors & reporting

CORE STACK

AI & AGENTS

LLM integration OpenAI
AWS Bedrock Agentic workflows
Multi-agent orchestration
Tool / function calling RAG
Prompt engineering LangChain
Human-in-the-loop Guardrails
PII redaction

CLOUD & DEVOPS

AWS EC2 IAM KMS ECR
SSM CloudWatch Secrets Manager
Terraform Docker
GitHub Actions CI/CD Linux
Tailscale Kubernetes

BACKEND & DATA

Python Node.js Express Django
REST APIs PostgreSQL Supabase
SQLite MongoDB DuckDB Polars
Parquet Job queues

FRONTEND

TypeScript React 19 Next.js 16
Tailwind CSS 4 Framer Motion
HTML5 / CSS3

PROFILE

AI Agent Engineer who designs and ships **multi-tenant AI platforms end to end**: agent orchestration, governance and guardrails, Python and TypeScript backends, React front ends, and AWS infrastructure as code. My rule is simple: **a model never holds authority on its own**. Sensitive actions wait for a human, customer data stays protected, and every action can be traced. IBM-certified Full Stack Developer.

FEATURED PROJECTS

NOVA — Governance Platform for AI Agents

2026

Run AI agents in a business under policy, with human approval and a verifiable audit trail.

Python React 19 TypeScript Tailwind 4 SQLite Docker Terraform AWS
Bedrock

- Built a **multi-tenant control plane** over the open-source Hermes Agent runtime, without forking it.
- Compiled agent permissions into a **fail-closed pre-tool-call hook**, so a denied action is blocked inside the agent process, not just hidden in the UI.
- Designed a **write-ahead audit log**: intent before every change, committed or failed after, with the human actor, tenant and correlation ID.
- Enforced **tenant isolation in SQL** with fair scheduling and per-tenant concurrency limits.
- Added **human approval gates**, governed scheduled automations, and agent routing across Telegram, Slack, Discord, WhatsApp and Signal.
- Built a white-label **Control Center** (React 19, Tailwind 4) with RBAC, CSRF protection and strict CSP.
- Wrote **Terraform for AWS**: EC2, EBS, KMS, IAM, ECR, CloudWatch and SSM, with no inbound ports, IMDSv2 and per-integration IAM roles.
- **900+ automated tests**, including tests that fail the build if architecture boundaries are crossed.

EDUCATION

IBM Full Stack Software Developer Professional Certificate

Coursera · 2025 · 15-course series: Python, Django, React, Node.js, microservices, Docker, Kubernetes, OpenShift, CI/CD

AI Engineering — continuing self-study

LLM applications, agentic systems, RAG and AI safety patterns

Bachelor of Islamic Law

Beder International University, Hargeisa

SECURITY

Tenant isolation Row-Level Security

RBAC Least-privilege IAM

Encryption at rest (KMS) CSRF & CSP

Audit logging Secrets management

HOW I BUILD

- **AI suggests, humans decide** on anything that touches money, customers or records.
- **Every action is traceable:** who asked, what ran, what changed.
- **Honest status:** the product never claims a control it doesn't enforce.
- **Tested, then shipped,** in small increments.

DataEngine — AI Data-Operations Copilot

2026

For accounting firms and retailers: messy spreadsheets in, approved fixes and client-ready reports out.

Next.js 16 React 19 TypeScript Supabase PostgreSQL Python Polars DuckDB
Docker GitHub Actions

- AI profiles client workbooks and proposes **materiality-ranked fixes**; an accountant approves each change before it becomes a new immutable version.
- **Queue-based agent architecture:** Postgres job queue with leases, so the agent host needs no inbound ports and a restart delays work instead of losing it.
- Deterministic maths in Polars and DuckDB; the LLM only makes judgment calls, through a **redaction layer that keeps raw customer rows away from the model**.
- Secured a **multi-tenant Supabase backend**: Row-Level Security, membership-checking database functions, tenant-scoped storage and Vault-held credentials.
- **QuickBooks Online, Odoo and spreadsheet connectors** report profit in English and Somali, with reports as PDF, Word, Excel and Markdown.
- **CI/CD with GitHub Actions:** Docker builds deploying over a private Tailscale network; 600+ Python tests plus an end-to-end suite.

EXPERIENCE

Independent Software & AI Engineer

Self-employed · Remote · 2023 – Present

- Design and build AI agent platforms, SaaS products and automation systems end to end: architecture, backend, frontend, cloud infrastructure and deployment.
- Created NOVA and DataEngine, plus apps and AI assistants for healthcare, education and customer service.
- Work with production discipline: small Git commits, automated tests, Docker, CI/CD and infrastructure as code.

Customer Service & Sales Representative

Various organisations · Hargeisa · 2019 – 2023

- Four years of front-line support and sales across phone, chat and in person; client relationships and retention.
- The reason my customer-facing agents have clear human handover, approval steps and a tone real customers accept.

MORE PROJECTS

Somali AI Companion

First AI companion for Somali speakers: bilingual Somali–English chat with a natural, culturally relevant personality.

OpenAI · React · Convex · Clerk

Agentic Bill Payment Agent

Handles bill payments and customer queries end to end, with error recovery and human escalation.

Python · OpenAI · Agentic workflows

Hospital Management System

Patient records, appointments, billing and staff management for Somali healthcare providers.

React · Node.js · PostgreSQL

Quran School Platform

Teacher and student dashboards with attendance, scheduling and progress tracking.

React · Node.js · Django
